SIMPLE Systems

Secure Integrated ML Platform Leveraging Expertise (SIMPLE)

Capturing Your Domain Expertise and Using It in Ways You Never Thought Possible

From knowing how to best configure a system, to understanding your most complex business processes, Domain Experts are critical to your success. As human resources, however, they are limited compared to the boundless potential of their knowledge.

SIMPLE embraces your expert knowledge to transform major challenges into exciting new opportunities.

SIMPLE Knowledge

SIMPLE leverages patented technology to transform your Domain Expertise into visually controlled, encapsulated tools that empower the rest of your organization.

SIMPLE Intelligence

SIMPLE leverages a first-of-its-kind distributed intelligent system to extend your current expertise deeper and wider than any person, or group of people could achieve on their own.

SIMPLE Solutions

SIMPLE leverages expert visual tools and intelligent systems through a platform that works everywhere, on everything, to solve the issues that are most challenging for your organization.

SIMPLE reduces your challenges into discrete secure responses that are privately controlled by your people, and automated across your enterprise.

This unique intelligence-based approach addresses a large range of objectives across many different verticals.

SIMPLE Security

Bear Systems has created an exciting new paradigm that overcomes all of the issues facing cybersecurity today, and in the future. Leveraging the power of SIMPLE, Bear Systems proactively identifies, isolates, and overcomes any threat, in any system, at scale, with no unwanted disruptions, and without requiring experts in operations. This powerful new paradigm enables Bear Systems to securely embrace your expert's knowledge and safely transform challenges into exciting new opportunities.

SIMPLE Energy

Centralized top-down approaches attempting to optimize energy utilization across traditional and smart grids has failed. SIMPLE Energy builds from the bottom up, to enable and enforce complex rules on each device and empower visual management at scale through expert-driven Energy Profiles.

SIMPLE Smart Cities

Smart cities, smart buildings, and smart devices are comprised of millions of diverse sensors and actuators that require a secure unified management solution. SIMPLE Smart Cities provides that solution by enabling vendor agnostic control across all devices and communications through dynamic Smart Policies.

SIMPLE Missions

The military operates across a wide range of diverse environments, and often through hostile territory. With a wide arrays of unique challenges to continuously overcome, SIMPLE Missions provides a unified platform that enables Military Expert Profiles to extend core domain knowledge in a secure manner. With SIMPLE Missions, soldiers will always be able to communicate safely, even through enemy networks, leveraging the best visualization tools and technical capabilities.
